

Amend the claims to include the following:

B1
34. A method for forming a flexible bioadhesive on a tissue, comprising:
contacting the tissue with a composition comprising a compound having an unsaturation index of at least about 500, a curing agent and an adhesion promoter, wherein the composition is curable and has a peak exotherm of less than about 50°C (120°F), and
curing the composition to form the flexible bioadhesive on the tissue.

B2
37. A composition comprising:
a compound having an unsaturation index of at least about 500, and
a curing agent, wherein the composition is curable and has a peak exotherm of less than about 50°C (120°F).

B3
56. A composition comprising a compound having less than about 40 % monomers, an unsaturation index of at least about 500, a curing agent and an adhesion promoter, wherein the composition is curable and has a peak exotherm of less than about 50°C (120°F).

57. A method of making a composition comprising the steps of:
selecting a compound having an unsaturation index of at least 500; and
mixing said compound with a curing agent and an adhesion promoter, wherein the mixture is curable and has a peak exotherm of less than about 50°C (120°F).

REMARKS

Status

Claims 1-7, 10, 11, 15, 16, 18-20, 22-33, 43 and 52-55 have been allowed. Claims 8, 9, 12-14, 17, 21, 34-42, 44-51 and 56-59 have been rejected.
